## Dodatok A

# Harmonogram práce

### A.1 Zimný semester

1 <sup>st</sup> -4 <sup>th</sup> week	Konzultácie & hľadanie potrebného obsahu
5 <sup>th</sup> week	Analyzovanie on-chain riešení
6 <sup>th</sup> week	Analyzovanie off-chain riešení
7 <sup>th</sup> week	Práca na úvode a analyzovanie hlavných problémov
8 <sup>th</sup> week	Nájdenie vhodných hier
9 <sup>th</sup> -10 <sup>th</sup> week	Prepájanie stránky a hry
11 <sup>th</sup> week	Funkčný model backendu a jednej hry
12 <sup>th</sup> week	Finalizácia dokumentu na odovzdanie

### A.2 Letný semester

1 <sup>st</sup> -2 <sup>nd</sup> week	Programovanie smart kontraktu a backendu
$3^{\rm rd}$ - $4^{\rm th}$ week	Zapajánie jednotlivých hier do pozície smart kontraktov
5 <sup>th</sup> -6 <sup>th</sup> week	Budovanie a testovanie funkcionality smart konraktu a hier
7 <sup>th</sup> -8 <sup>th</sup> week	Front-end webovej stránky
10 <sup>th</sup> week	Konzultácie
11 <sup>th</sup> -12 <sup>th</sup> week	Finalizácia dokumentu na odovzdanie

#### Dodatok B

#### Dodatok C

## Používateľská príručka

Pred spustením jednotlivých skriptov je dôležité nainštalovať si *node.js* zo stránky https://nodejs.org/en/download/ a taktiež testovacie prostredie Ganache zo stránky https://trufflesuite.com/ganache/. Práca bola testovaná na node verzii 8.3.1 a na Ganache verzii 2.5.4.

Práca bola vyhotovená na operačnom systéme Windows 10 a Windows 11 64-bit. Otestované prehliadače sú Google Chrome a Brave s doplnkom Metamask, kde je potrebné vytvoriť si účet a následne importovať účty z Ganache. Vrámci metamask je dôležité povoliť v nastaveniach testovacie siete a následne sa prepnúť na sieť *Rinkeby Test Network*.

Spustenie serveru pre back-end aj front-end, kde môžeme hrať zakladnú hru piškvôrky, vytvárať hry, spustíme pomocou *startServer.cmd* súboru, ktorý stačí otvoriť vo Windows. Ide o bežný windows cmd skript, ktorý vykoná spustenie serveru na adrese http://localhost:3000/. Po spustení sa hlavná stránka nachádza na spomínanej http://localhost:3000/, avšak v prípade ak chcete deployovať kontrakt, používa sa adresa http://localhost:3000/deploy.

Potrebné knižnice zložky /master vypíšeme do súboru libraries.txt pomocou spustenia skriptu printLibraries.cmd a potrebné knižnice /hardhat vypíšeme do súboru librariesHardhat.txt pomocou spustenia skriptu printHLibraries.cmd. Prípadná doinštalácia knižníc prebieha pomocou cmd, po spustení cmd, zvolíme cd cesta napr. cd /hardhat a následne napíšeme príkaz npm install nazovKniznice.
